

## Current Transfection Efficiency

Embryonic stage	Survived embryos (%)	EYFP+ embryos (%)
E12.5	82.8±9.49	100±0
E13.5	91.6±2.0	89.6±2.33
E15.5	90.2±7.06	91.7±8.33

( October, 2001 )

### Transfection Efficiency

*exo utero* electroporation was performed for E12.5 embryos, whereas *in utero* electroporation was performed at E13.5 and E15.5. Survival and EYFP+ rates (percentages) were calculated for every litter from the number of surviving embryos/operated and EYFP-positive/surviving embryos, respectively. The data are represented as mean ± SEM.
